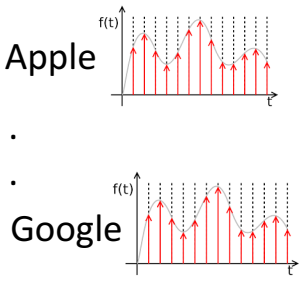
Sutardja Center for Entrepreneurship & Technology
IEOR Emerging Area Professor Award, UC Berkeley

Data Sequence in Tables Example



Discrete data for each source
A, B, C..
x_n = x1, x2, x3, …

	Price	Price[n-20]	20 day MA	1 year average	Expected Price?
APPL	appl[n]	appl[n-20]	mva(appl, 20)	mva(appl, 200)	
FB	fb[n]	fb[n-20]	mva(fb,20)	mva(fb,200)	
GOOG	goog[n]	goog[n-20]	mva(goog, 20)	mva(goog, 200)	

Data Input and Temp Storage

Preprocess (and lose some information)

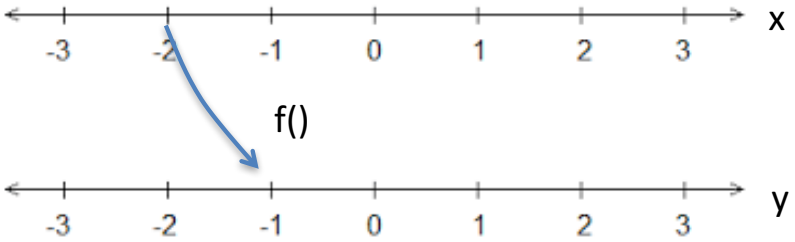
ML for Decisions / Predictions

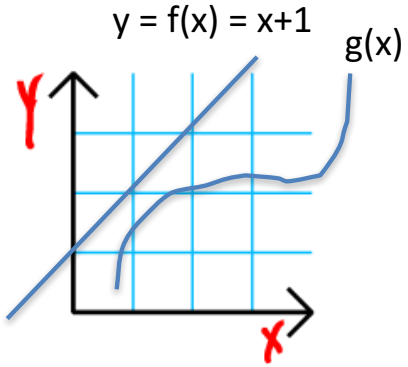
Jean Baptiste Joseph Fourier (1768-1830)

- Had crazy idea (1807):
- **Any** periodic function can be rewritten as a weighted sum of Sines and Cosines of different frequencies.
- Don't believe it?
  - Neither did Lagrange, Laplace, Poisson and other big wigs
  - Not translated into English until 1878!
- But it's true!
  - called Fourier Series
  - Possibly the greatest tool used in Engineering

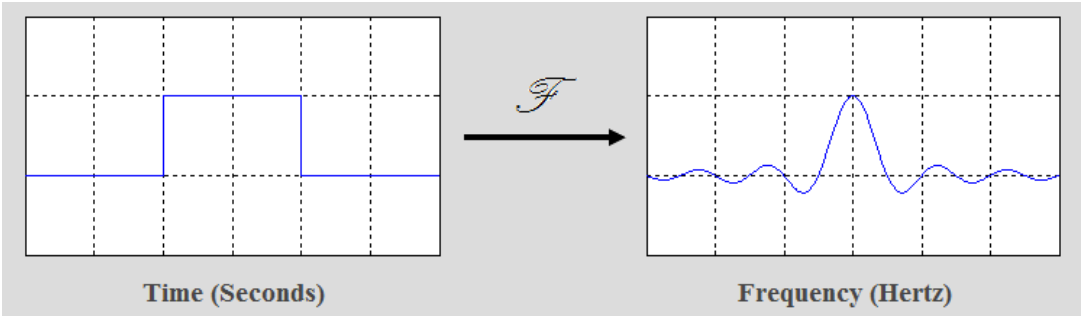
S. Narasimhan, Computer Vision

Fourier Transform
The most famous of mathematical transforms



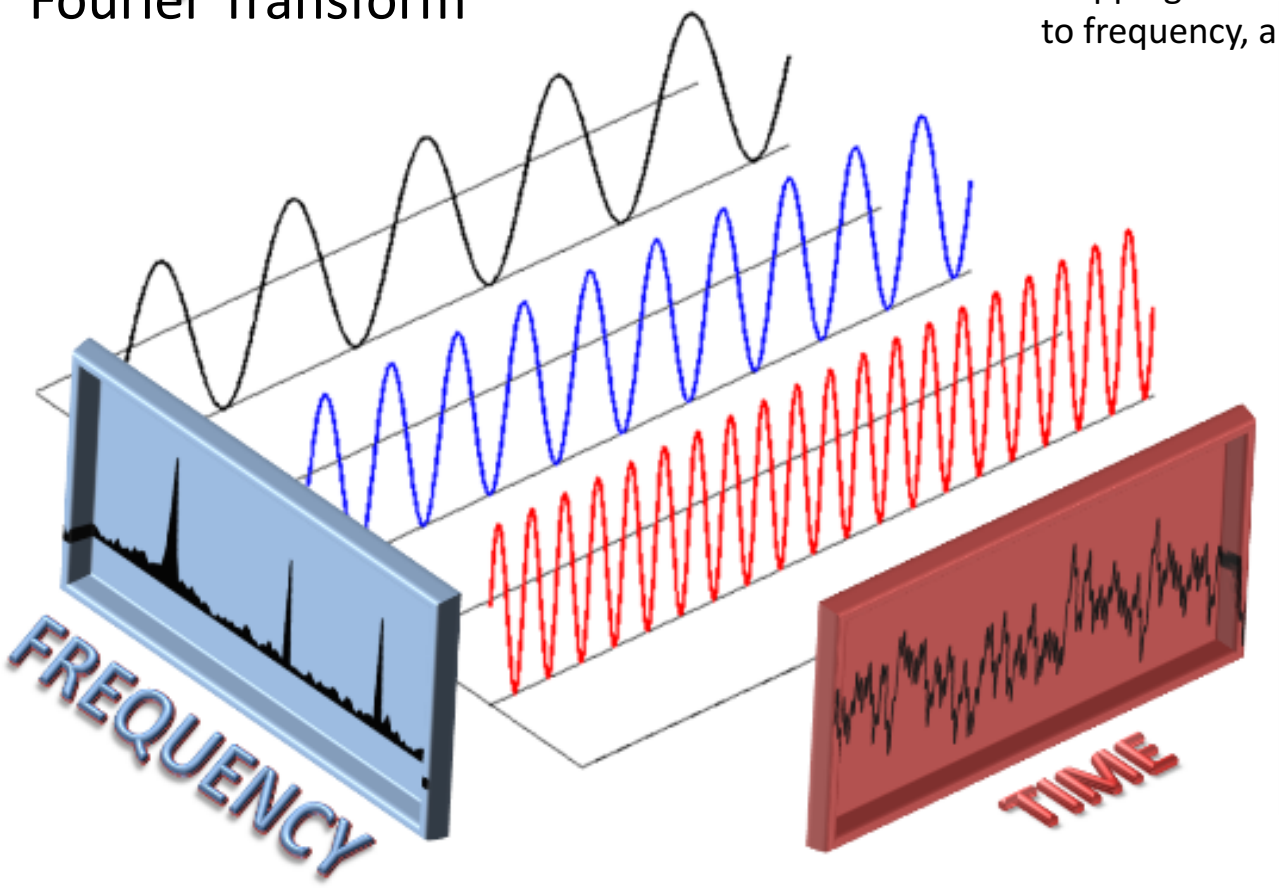


- A Transform is not a function: ie mapping from one variable to another



Fourier Transform

Mapping from a time
to frequency, and back.



groups.csail.mit.edu/netmit/wordpress/projects/sparse-fourier-transform/

In more detail

$$X(f) = \int_{-\infty}^{\infty} x(t) \times e^{-i2\pi ft}\, dt$$

x or t = time, f(x) or x(t) is a function of time

i or j are for imaginary numbers. Note X and x are both complex.

f or s is often used for frequency, so F(s) is a function in frequency

Integrate (average) over all time (for every given frequency)

In more detail

$$X(f) = \int_{-\infty}^{\infty} x(t) \times e^{-i2\pi ft}\, dt$$

Remember that

$$cos(\theta) + i \times sin(\theta) = e^{i\theta}$$

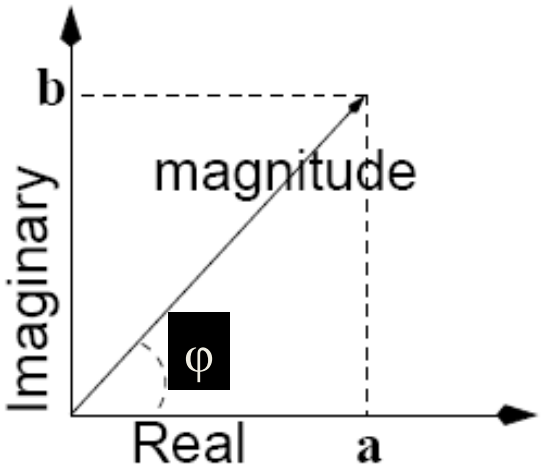
$$cos(2\pi ft) + i \times sin(2\pi ft) = e^{i2\pi ft}$$

Mathematical Background:Complex Numbers

- Magnitude-Phase (i.e.,vector) representation

$$x = a + jb, \text{ where } j = \sqrt{-1}$$

Magnitude:



$$|x| = \sqrt{a^2 + b^2}$$

$$\phi(x) = \tan^{-1}(b/a)$$

Phase – Magnitude notation:

$$x = |x|e^{j\phi(x)}$$

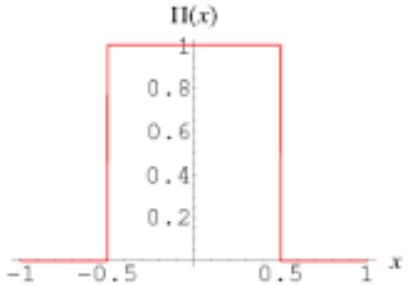
And this is the unit circle

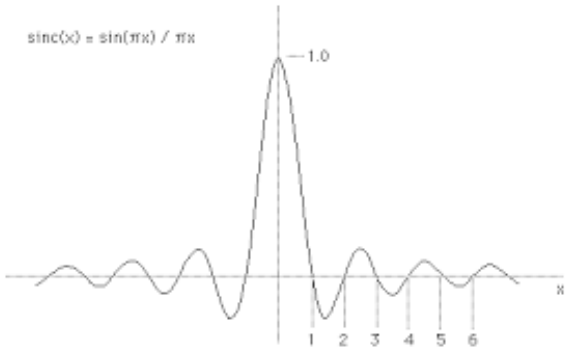
$$e^{-j2\pi ft} = \cos(2\pi fx) - j\sin(2\pi fx)$$

Fourier Basics

Inverse $f(x) = \int_{-\infty}^{\infty} F(k) \mathrm{e}^{2\pi i k x} dk$

Forward $F(k) = \int_{-\infty}^{\infty} f(x) \mathrm{e}^{-2\pi i k x} dx$





This example is the famous rect(x) which transforms to Sinc(f)

$$\mathrm{rect}(t) = \Pi(t) = \begin{cases} 0 & \text{if } |t| > \frac{1}{2} \\ \frac{1}{2} & \text{if } |t| = \frac{1}{2} \\ 1 & \text{if } |t| < \frac{1}{2}. \end{cases}$$

Which is right?

$$\mathrm{sinc}(x) = \frac{\sin(x)}{x}\,.$$

$$\mathrm{sinc}(x) = \frac{\sin(\pi x)}{\pi x}\,.$$

Scaling

Property Examples

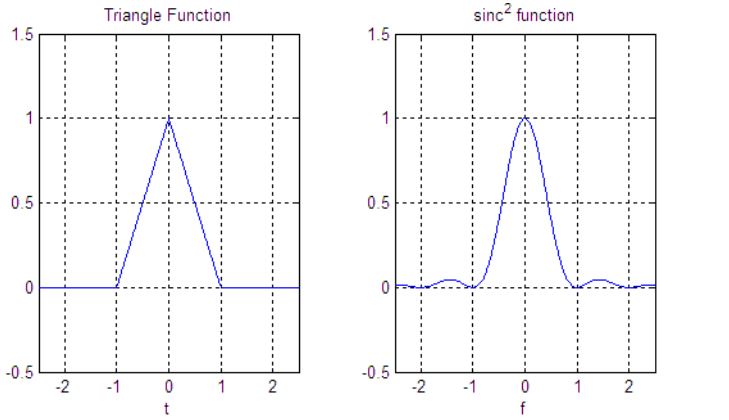
What is Fourier of Rect (t/T)

Scaling $f(ax)$ $\frac{1}{|a|}F\left(\frac{u}{a}\right)$

$$\text{rect}(t) = \Pi(t) = \begin{cases} 0 & \text{if } |t| > \frac{1}{2} \\ \frac{1}{2} & \text{if } |t| = \frac{1}{2} \\ 1 & \text{if } |t| < \frac{1}{2}. \end{cases}$$

Another Common Example

What is Fourier of $\triangle(t)$



If you want to see the proof:

$$\Delta(f) = \Im\{\Lambda(t)\} = \int_{-\infty}^{\infty} \Lambda(t) e^{-2\pi i f t}\, dt$$

$$= \int_{-1}^{0} (1+t) e^{-2\pi i f t}\, dt + \int_{0}^{1} (1-t) e^{-2\pi i f t}\, dt$$

$$= \left[\frac{1+2\pi i f}{4\pi^2 f^2} - \frac{e^{2\pi i f}}{4\pi^2 f^2}\right] - \left[\frac{2\pi i f - 1}{4\pi^2 f^2} + \frac{e^{-2\pi i f}}{4\pi^2 f^2}\right]$$

$$= -\frac{e^{-2\pi i f}\left(e^{2\pi i f} - 1\right)^2}{4\pi^2 f^2}$$

$$= -\frac{e^{-2\pi i f}\left(e^{\pi i f}\left[e^{\pi i f} - e^{-\pi i f}\right]\right)^2}{4\pi^2 f^2}$$

$$= -\frac{e^{-2\pi i f} e^{2\pi i f} (2i)^2 \sin^2(\pi f)}{4\pi^2 f^2}$$

$$= \left(\frac{\sin(\pi f)}{\pi f}\right)^2 = \operatorname{sinc}^2 f$$

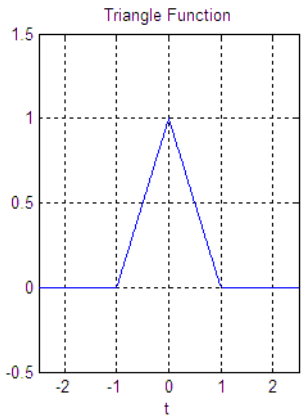
http://www.thefouriertransform.com/pairs/triangle.php

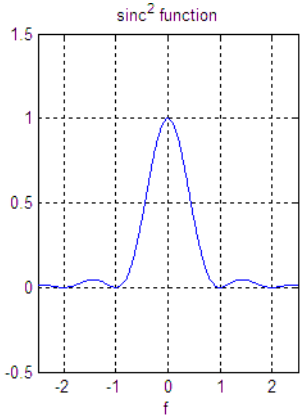
Property Examples

Time Shift

What is Fourier of △(t-a)

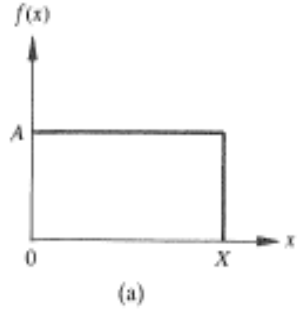
Shifting $f(x-x_0) \quad e^{-i2\pi ux_0}F(u)$

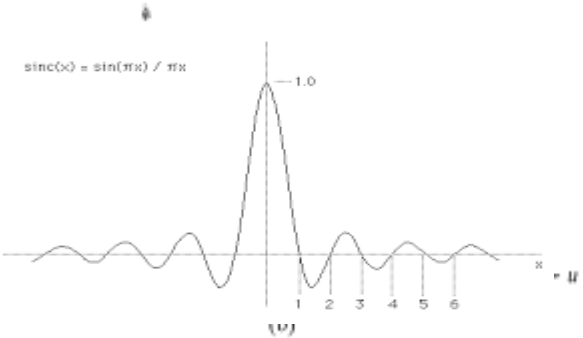




Is this true

Example: rectangular pulse





Rect((x –50)/100) sinc(x)

Linearity	$c_1 f(x) + c_2 g(x)$	$c_1 F(u) + c_2 G(u)$
Scaling	$f(ax)$	$\frac{1}{\lvert a \rvert} F\left(\frac{u}{a}\right)$
Shifting	$f(x - x_0)$	$e^{-i2\pi u x_0} F(u)$

Properties of Fourier Transform

Common Closed Form Transforms and Properties

	Spatial Domain *(x)*	Frequency Domain *(u)*
Linearity	$c_1 f(x) + c_2 g(x)$	$c_1 F(u) + c_2 G(u)$
Scaling	$f(ax)$	$\frac{1}{\lvert a \rvert} F\left(\frac{u}{a}\right)$
Shifting	$f(x - x_0)$	$e^{-i2\pi u x_0} F(u)$
Symmetry	$F(x)$	$f(-u)$
Conjugation	$f^*(x)$	$F^*(-u)$
Convolution	$f(x) * g(x)$	$F(u)G(u)$
Differentiation	$\frac{d^n f(x)}{dx^n}$	$(i2\pi u)^n F(u)$

S. Narasimhan, Computer Vision

Common Closed Form Transforms and **More Properties**

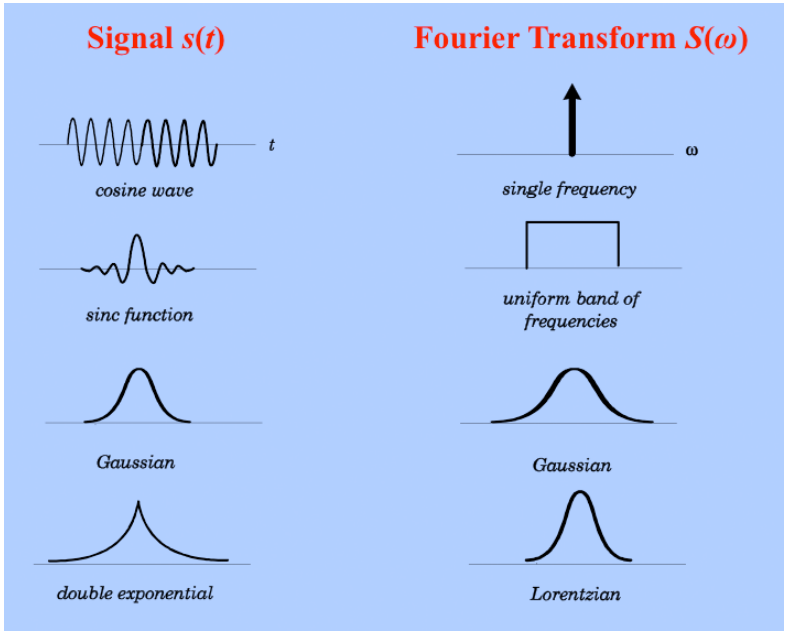


TABLE 4-1
Fourier Transform Theorems[a]

Name of Theorem		
1. Superposition (a_1 and a_2 arbitrary constants)	$a_1x_1(t) + a_2x_2(t)$	$a_1X_1(f) + a_2X_2(f)$
2. Time delay	$x(t - t_0)$	$X(f)e^{-j2\pi ft_0}$
3a. Scale change	$x(at)$	$\lvert a\rvert^{-1}X\left(\frac{f}{a}\right)$
b. Time reversal	$x(-t)$	$X(-f) = X*(f)$
4. Duality	$X(t)$	$x(-f)$
5a. Frequency translation	$x(t)e^{j\omega_0 t}$	$X(f - f_0)$
b. Modulation	$x(t)\cos\omega_0 t$	$\frac{1}{2}X(f - f_0) + \frac{1}{2}X(f + f_0)$
6. Differentiation	$\frac{d^n x(t)}{dt^n}$	$(j2\pi f)^n X(f)$
7. Integration	$\int_{-\infty}^{t} x(t')\,dt'$	$(j2\pi f)^{-1}X(f) + \frac{1}{2}X(0)\delta(f)$
8. Convolution	$\int_{-\infty}^{\infty} x_1(t - t')x_2(t')\,dt'$	$X_1(f)X_2(f)$
	$= \int_{-\infty}^{\infty} x_1(t')x_2(t - t')\,dt'$	
9. Multiplication	$x_1(t)x_2(t)$	$\int_{-\infty}^{\infty} X_1(f - f')X_2(f')\,df'$
		$= \int_{-\infty}^{\infty} X_1(f')X_2(f - f')\,df'$

[a] $\omega_0 = 2\pi f_0$; $x(t)$ is assumed to be real in 3b.

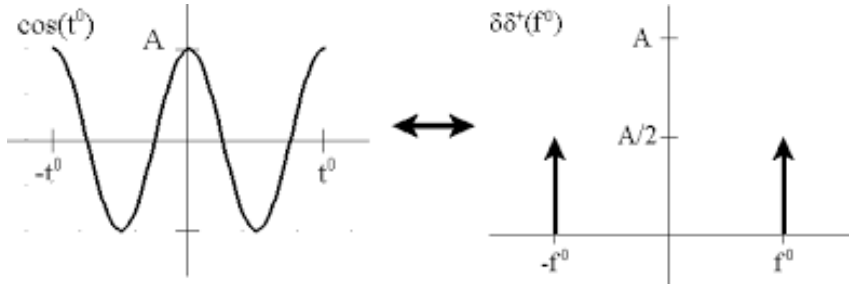
Lets look at these transforms?

$$G(f) = \Im\{\cos(2\pi At)\} = \int_{-\infty}^{\infty} \frac{e^{i2\pi At} + e^{-i2\pi At}}{2} e^{-i2\pi ft} dt$$

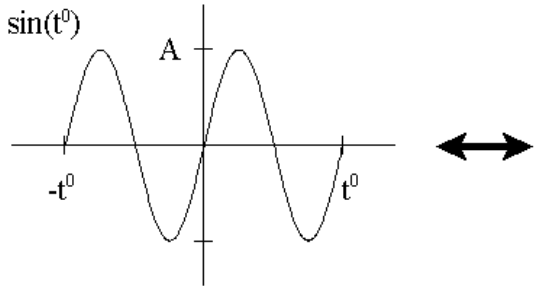
$$= \frac{1}{2}\left[\int_{-\infty}^{\infty} e^{i2\pi At} e^{-i2\pi ft} dt + \int_{-\infty}^{\infty} e^{-i2\pi At} e^{-i2\pi ft} dt\right]$$

$$= \frac{1}{2}[\delta(f - A) + \delta(f + A)]$$

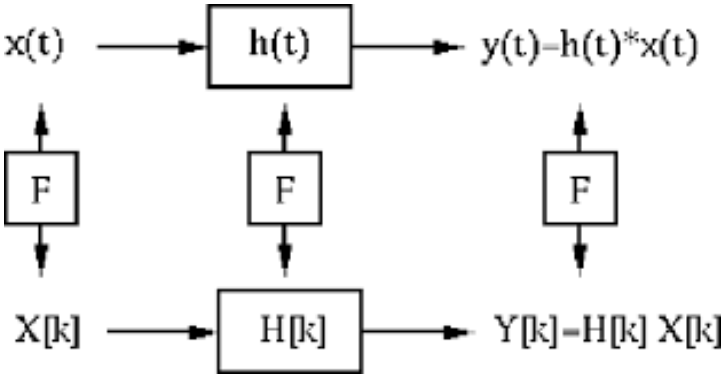
A Cos (2 pi f0 t)



A Sin (2 pi f0 t)

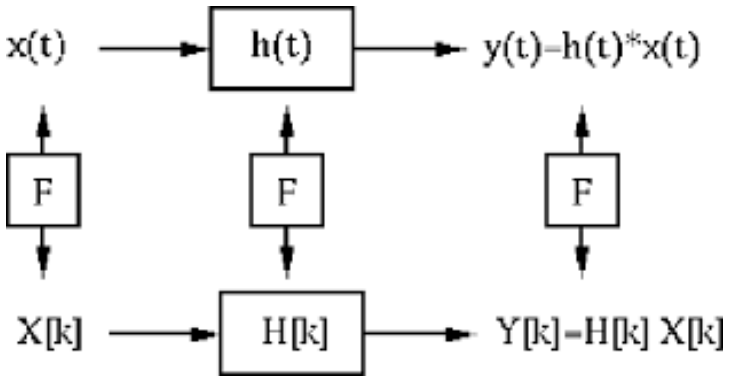


And of course, there is a famous link between Fourier, LTI, and Convolution



The reverse is also true:
x(t) x h(t) -> y(t)
X(f) * H(f) -> Y(F)

And of course, there is a famous link between Fourier, LTI, and Convolution



Example:

w(t) = data window = rect (t-50/25)
x(t) = data signal

The reverse is also true:
x(t) x h(t) -> y(t)
X(f) * H(f) -> Y(F)

NumPy FFT
Example 1

Working with Numpy FFT Results: Scaling and Folding

Imports

In [1]:
```
%matplotlib inline
import numpy as np
import matplotlib.pyplot as plt
```

Create a Test Signal

f_s is the sampling frequency, while f is a base frequency for the signal content. We create a signal that contains components at a couple of multiples of this base frequency. Note the amplitudes here since we will be trying to extract those correctly from the FFT later.

In [2]:
```
f_s = 50.0 # Hz
f = 1.0 # Hz
time = np.arange(0.0, 3.0, 1/f_s)
x = 5 * np.sin(2 * np.pi * f * time) + 2 * np.sin(10 * 2 * np.pi * f * time)
```

In [3]:
```
plt.plot(time, x)
plt.xlabel("Time (sec)")
plt.ylabel("x")
```

Out[3]: <matplotlib.text.Text at 0x6e22b10>

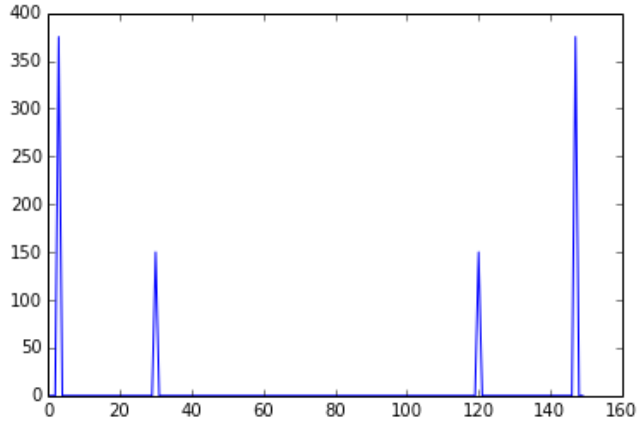
  -0.33333333]
```

```
In [5]: plt.plot(np.abs(fft_x))
```

```
Out[5]: [<matplotlib.lines.Line2D at 0x70986f0>]
```



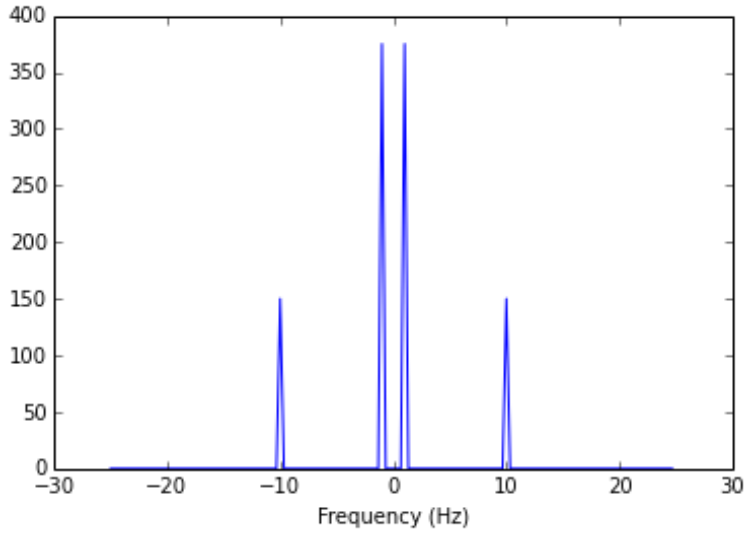
Swap Half Spaces

Note that frequencies in the FFT and the `freq` vector go from zero to some larger positive number then from a large negative number back toward zero. We can swap that so that the DC component is in the center of the vector while maintaining a two-sided spectrum.

In [6]:
```
fft_x_shifted = np.fft.fftshift(fft_x)
freq_shifted = np.fft.fftshift(freq)
```

In [7]:
```
plt.plot(freq_shifted, np.abs(fft_x_shifted))
plt.xlabel("Frequency (Hz)")
```

Out[7]: `<matplotlib.text.Text at 0x70a2b50>`



NumPy FFT Example 1

NumPy FFT Example 1

fs = 50
n = 3 *50
fs/n = 1/3

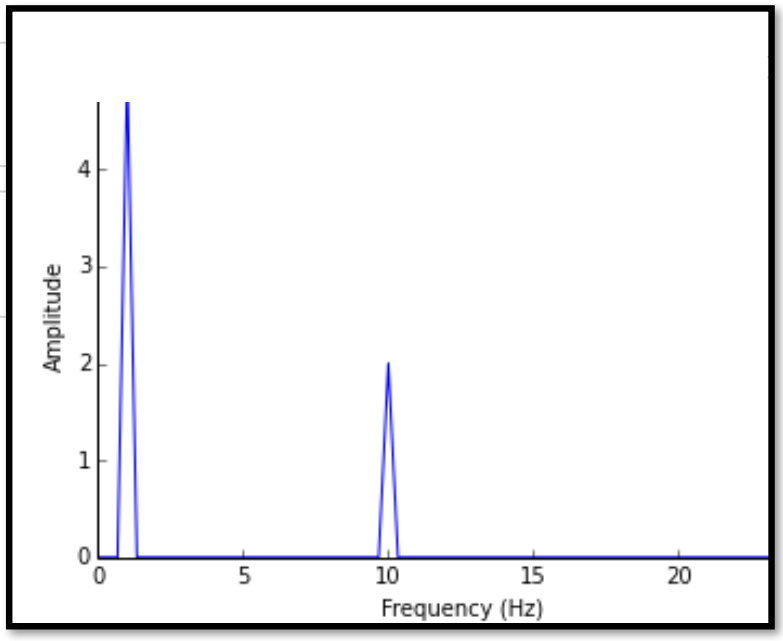
Fold Negative Frequencies and Scale

It's actually more common to look at just the first half of the unshifted FFT and frequency vectors and fold all the amplitude information into the positive frequencies. Furthermore, to get ampltude right, we must normalize by the length of the original FFT. Note the factor of $2/n$ in the following which accomplishes both the folding and scaling.

```
In [8]: half_n = np.ceil(n/2.0)
        fft_x_half = (2.0 / n) * fft_x[:half_n]
        freq_half = freq[:half_n]
```

```
In [9]: plt.plot(freq_half, np.abs(fft_x_half))
        plt.xlabel("Frequency (Hz)")
        plt.ylabel("Amplitude")
```

```
Out[9]: <matplotlib.text.Text at 0x6edc150>
```



This is just slicing of the arrays.

FFT Example in NumPy with complex input signal

```
>>> np.fft.fft(np.exp(2j * np.pi * np.arange(8) / 8))

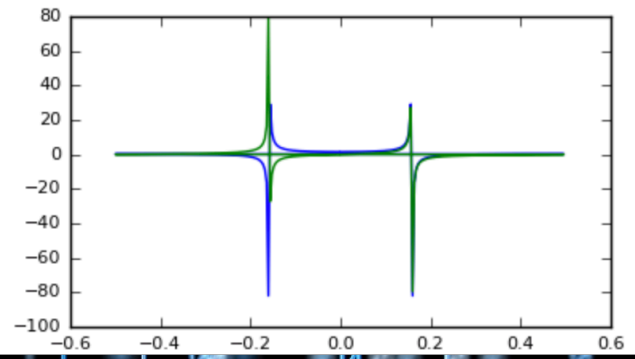
array([ -3.44505240e-16 +1.14383329e-17j,
        8.00000000e+00 -5.71092652e-15j,
        2.33482938e-16 +1.22460635e-16j,
        1.64863782e-15 +1.77635684e-15j,
        9.95839695e-17 +2.33482938e-16j,
        0.00000000e+00 +1.66837030e-15j,
        1.14383329e-17 +1.22460635e-16j,
        -1.64863782e-15 +1.77635684e-15j])
```

```
>>> np.fft.fft(np.exp(2j * np.pi * np.arange(8) / 8))
array([ -3.44505240e-16 +1.14383329e-17j,
         8.00000000e+00 -5.71092652e-15j,
         2.33482938e-16 +1.22460635e-16j,
         1.64863782e-15 +1.77635684e-15j,
         9.95839695e-17 +2.33482938e-16j,
         0.00000000e+00 +1.66837030e-15j,
         1.14383329e-17 +1.22460635e-16j,
         -1.64863782e-15 +1.77635684e-15j])
```

In this example, real input has an FFT which is Hermitian, i.e., symmetric in the real part and anti-symmetric in the imaginary part, as described in the numpy.fft documentation:

```
>>> import matplotlib.pyplot as plt
>>> t = np.arange(256)
>>> sp = np.fft.fft(np.sin(t))
>>> freq = np.fft.fftfreq(t.shape[-1])
>>> plt.plot(freq, sp.real, freq, sp.imag)
[<matplotlib.lines.Line2D object at 0x...>, <matplotlib.lines.Line2D object at 0
x...>]
>>> plt.show()
```

(Source code, png, pdf)



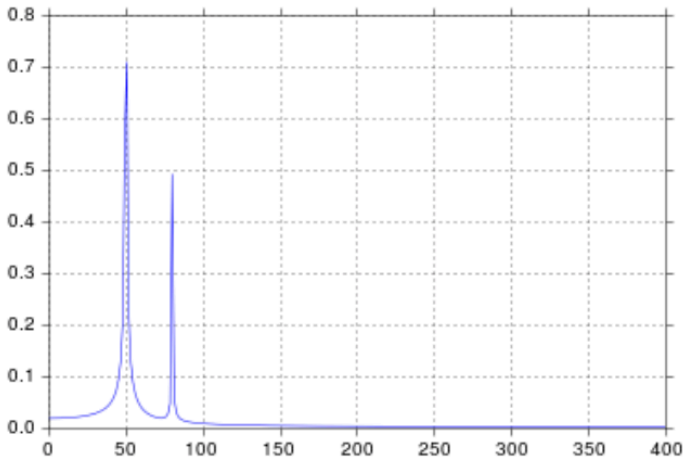
A SciPy Example

```
%matplotlib inline
import numpy as np
import matplotlib.pyplot as plt
import scipy.fftpack

# Number of samplepoints
N = 600
# sample spacing
T = 1.0 / 800.0
x = np.linspace(0.0, N*T, N)
y = np.sin(50.0 * 2.0*np.pi*x) + 0.5*np.sin(80.0 * 2.0*np.pi*x)
yf = scipy.fftpack.fft(y)
xf = np.linspace(0.0, 1.0/(2.0*T), N/2)

fig, ax = plt.subplots()
ax.plot(xf, 2.0/N * np.abs(yf[:N//2]))
plt.show()
```

I get what I believe to be very reasonable output.



FFT Tool Example with SciPy

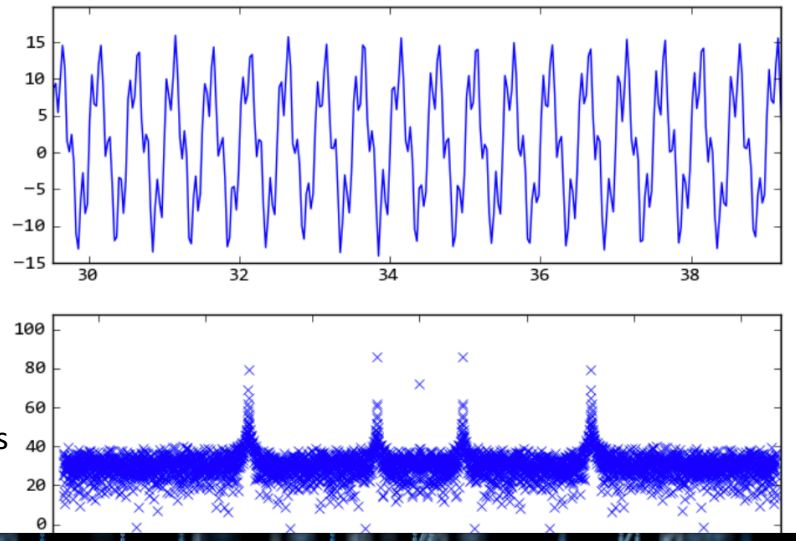
```
import scipy
import scipy.fftpack
import pylab
from scipy import pi
t = scipy.linspace(0,120,4000)
acc = lambda t: 10*scipy.sin(2*pi*2.0*t) + 5*scipy.sin(2*pi*8.0*t) + 2*scipy.random.

signal = acc(t)

FFT = abs(scipy.fft(signal))
freqs = scipy.fftpack.fftfreq(signal.size, t[1]-t[0])

pylab.subplot(211)
pylab.plot(t, signal)
pylab.subplot(212)
pylab.plot(freqs,20*scipy.log10(FFT),'x')
pylab.show()
```

from the graph you can see there are two peak at 2Hz and 8Hz.

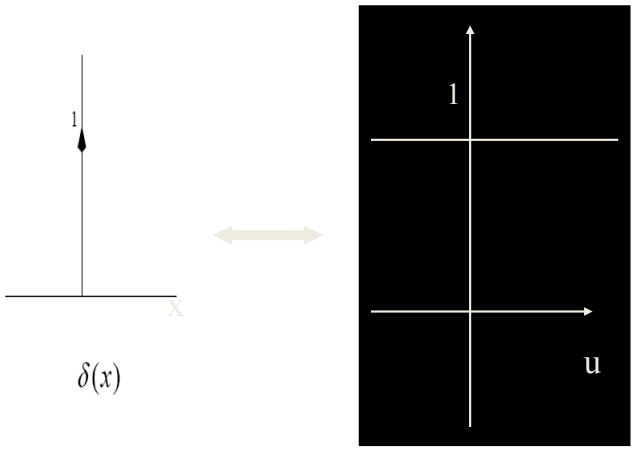


See stack overflow:
http://stackoverflow.com/questions/9456037/scipy-numpy-fft-frequency-analysis

Example: impulse or “delta” function

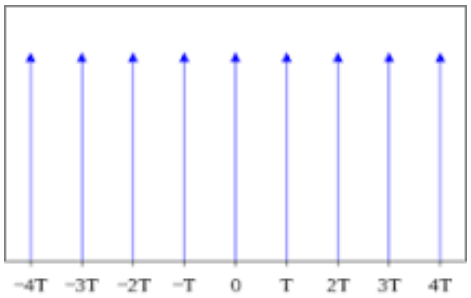
- FT of delta function:

$$F(\delta(x)) = \int_{-\infty}^{\infty} \delta(x) e^{-j2\pi ux} dx = e^{0} = 1$$



But wait, that was discrete, and Fourier was continuous

This is the comb function:



1 2. 3. 4. 5. 6…

What would this be?
III (t/T) =

III (t) = $\sum_{k=-\infty}^{\infty}$ (t-k)

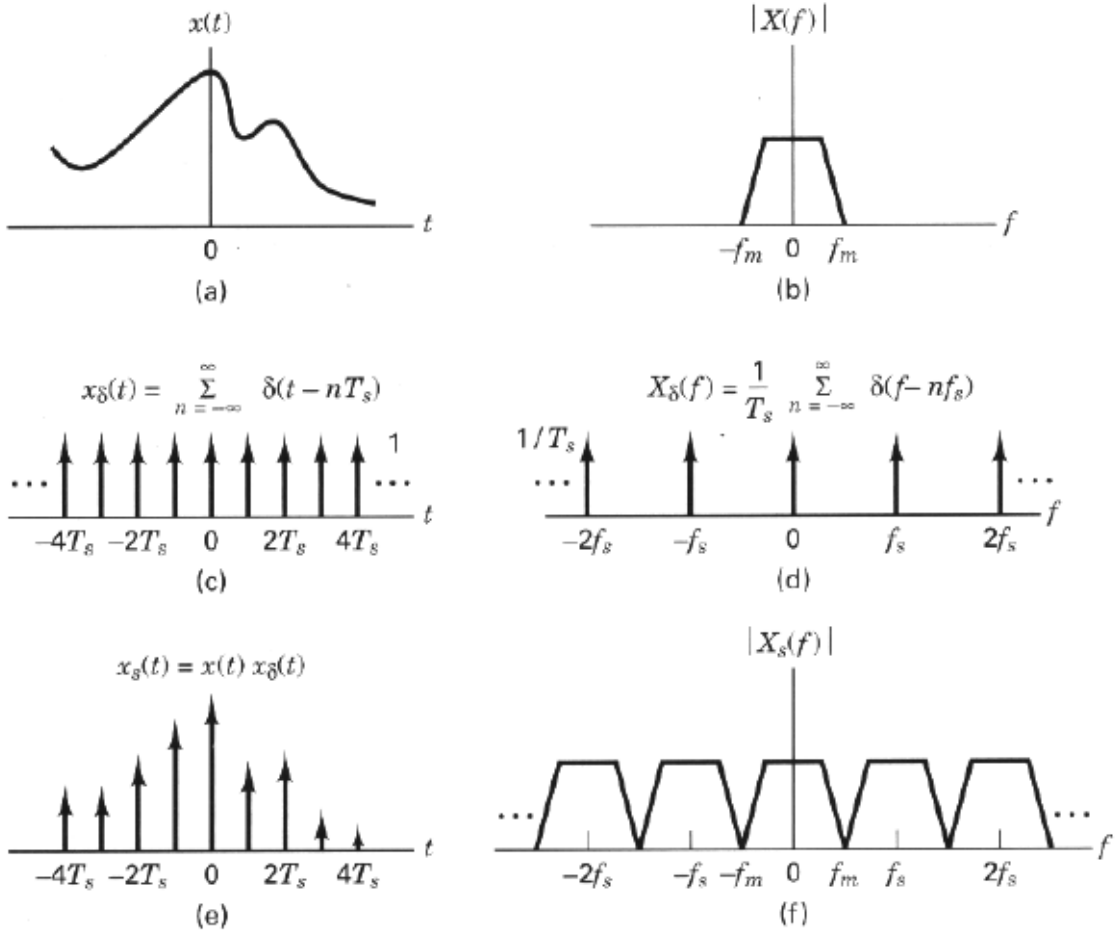
Notably, the unit period Dirac comb transforms to itself:

$$\mathrm{III}(t) \overset{\mathcal{F}}{\longleftrightarrow} \mathrm{III}(f)$$

By understanding the properties of the Comb, we can map between the time signal and the frequency samples

Sampled with time T, and with N samples means:

Each frequency bin in the FFT = 1/(T*N)



http://docs.exdat.com/docs/index-44055.html

Lets make this clear: the time domain units to frequency mapping

- We take a reading of a blood pressure every 30 seconds

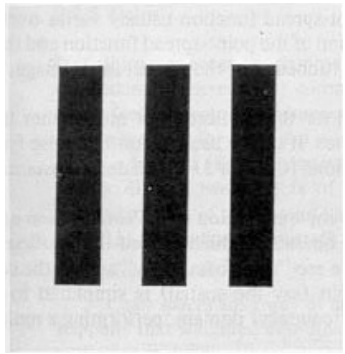
- The result for 32 min is
- X = [100, 105, 98, …. 102], 64 readings

- Then we take the FFT (Discrete time transform) and we have a sequnce
- Y = [1+2j, …. …….. 2.0+3j] also 64 values

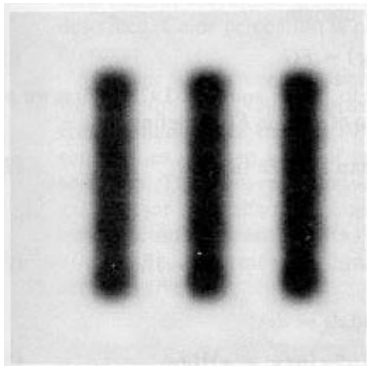
- What does each FFT value mean?

How do frequencies show up in an image?

- Low frequencies correspond to slowly varying information (e.g., continuous surface).
- High frequencies correspond to quickly varying information (e.g., edges)



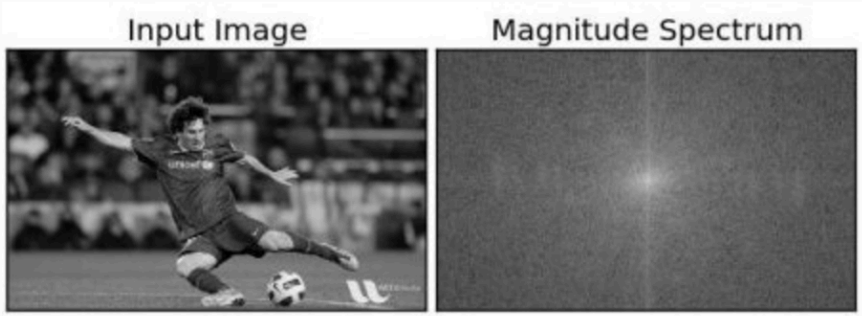
Original Image



Low-passed

Naveen Sihag

As we have seen before, getting image data and 2-d FFTs are possible with NumPy and Open CV



```
import cv2
import numpy as np
from matplotlib import pyplot as plt

img = cv2.imread('messi5.jpg',0)
f = np.fft.fft2(img)
fshift = np.fft.fftshift(f)
magnitude_spectrum = 20*np.log(np.abs(fshift))

plt.subplot(121),plt.imshow(img, cmap = 'gray')
plt.title('Input Image'), plt.xticks([]), plt.yticks([])
plt.subplot(122),plt.imshow(magnitude_spectrum, cmap = 'gray')
plt.title('Magnitude Spectrum'), plt.xticks([]), plt.yticks([])
plt.show()
```

2-D Fourier Transforms

$$F(u,v) = \int_{-\infty}^{+\infty}\int_{-\infty}^{+\infty} f(x,y)e^{-j2\pi(ux+vy)}dxdy$$

$$f(x,y) = \int_{-\infty}^{+\infty}\int_{-\infty}^{+\infty} F(u,v)e^{j2\pi(ux+vy)}dudv$$

$$\text{F(x,y)} = \sum_{m=0}^{M-1}\sum_{n=0}^{N-1} f(m,n)e^{-j2\pi(x\frac{m}{M}+y\frac{n}{N})}$$

$$\text{f(m,n)} = \frac{1}{MN}\sum_{m=0}^{M-1}\sum_{n=0}^{N-1} F(x,y)e^{j2\pi(x\frac{m}{M}+y\frac{n}{N})}$$

With NumPy, use fft2 for 2-d convolution.
Also see numpy.fft, ifft2, fftn, fftshift ..

```
array([[0, 0, 0, 0, 0],

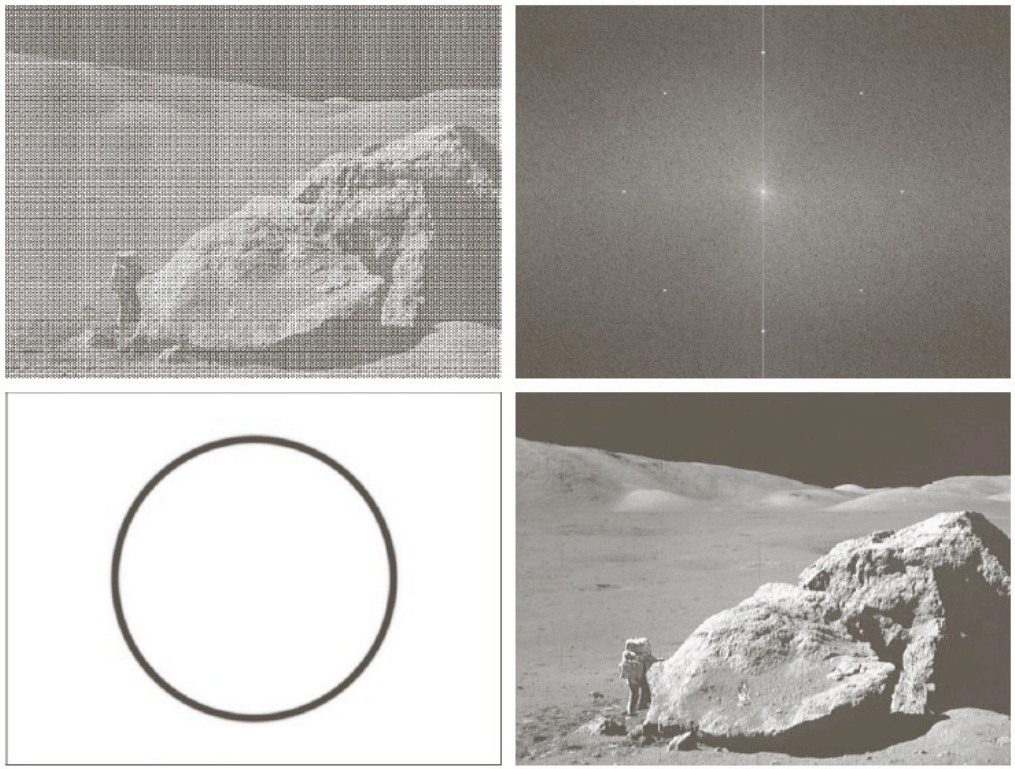
Example of noise reduction using FT



Naveen Sihag

Frequency Filtering Steps

1. Take the FT of f(x):

2. Remove undesired frequencies: $F(f(x))$

3. Convert back to a signal: $D(F(f(x)))$

$$\hat{f}(x)=F^{-1}(D(F(f(x))))$$

We'll talk more about this later .....

Naveen Sihag

Extending DFT to 2D

- Assume that f(x,y) is M x N.
- Forward DFT

$$F(u,v) = \frac{1}{MN} \sum_{x=0}^{M-1} \sum_{y=0}^{N-1} f(x,y) e^{-j2\pi(\frac{ux}{M}+\frac{vy}{N})}$$

$$(u = 0, 1, \ldots, M-1, v = 0, 1, \ldots, N-1)$$

- Inverse DFT:

$$f(x,y) = \sum_{u=0}^{M-1} \sum_{v=0}^{N-1} F(u,v) e^{j2\pi(\frac{ux}{M}+\frac{vy}{N})}$$

$$(x = 0, 1, \ldots, M-1, y = 0, 1, \ldots, N-1)$$

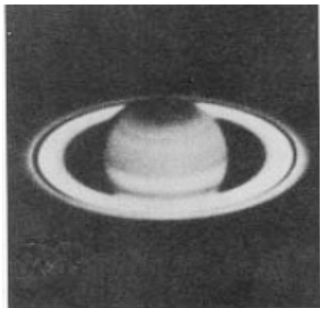
Naveen Sihag

Visualizing DFT

- Typically, we visualize |F(u,v)|
- The dynamic range of |F(u,v)| is typically very large

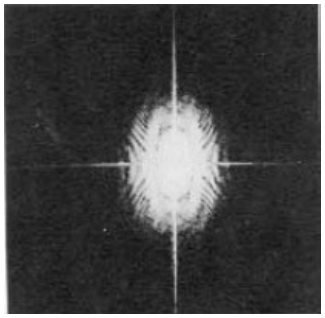
- Apply stretching: (c is const)

$$D(u,v) = c\ log(1 + |F(u,v)|)$$



original image

before scaling



after scaling

Naveen Sihag

DFT Properties: (1) Separability

- The 2D DFT can be computed using 1D transforms **only**:

Forward DFT:

$$F(u,v) = \frac{1}{N}\sum_{x=0}^{N-1}\sum_{y=0}^{N-1} f(x,y)e^{-j2\pi(\frac{ux+vy}{N})}$$

Inverse DFT:

$$f(x,y) = \frac{1}{N}\sum_{u=0}^{N-1}\sum_{v=0}^{N-1} F(u,v)e^{j2\pi(\frac{ux+vy}{N})}$$

kernel is separable:

$$e^{-j2\pi(\frac{ux+vy}{N})} = e^{-j2\pi(\frac{ux}{N})}e^{-j2\pi(\frac{vy}{N})}$$

Naveen Sihag

DFT Properties: (4) Translation

f(x,y) $\longleftrightarrow$ **F(u,v)**

- Translation is spatial domain:

$$f(x-x_0, y-y_0) \longleftrightarrow F(u,v)e^{-j2\pi(\frac{ux_0+vy_0}{N})}$$

- Translation is frequency domain:

$$f(x,y)e^{j2\pi(u_0x+v_0y)} \longleftrightarrow F(u-u_0, v-v_0)$$

Naveen Sihag

DFT Properties: (4) Translation (cont'd)

- To move F(u,v) at (N/2, N/2), take $u_0 = v_0 = N/2$

Using $f(x,y)e^{j2\pi(u_0 x + v_0 y)/N} \Longleftrightarrow F(u-u_0, v-v_0)$

$$e^{j2\pi(\frac{\frac{N}{2}x+\frac{N}{2}y}{N})} = e^{j\pi(x+y)} = (-1)^{x+y}$$

$$f(x,y)(-1)^{x+y} \Longleftrightarrow F(u-N/2, v-N/2)$$

Naveen Sihag

DFT Properties: (4) Translation (cont'd)

$$f(x, y)(-1)^{x+y} \Longleftrightarrow F(u - N/2, v - N/2)$$

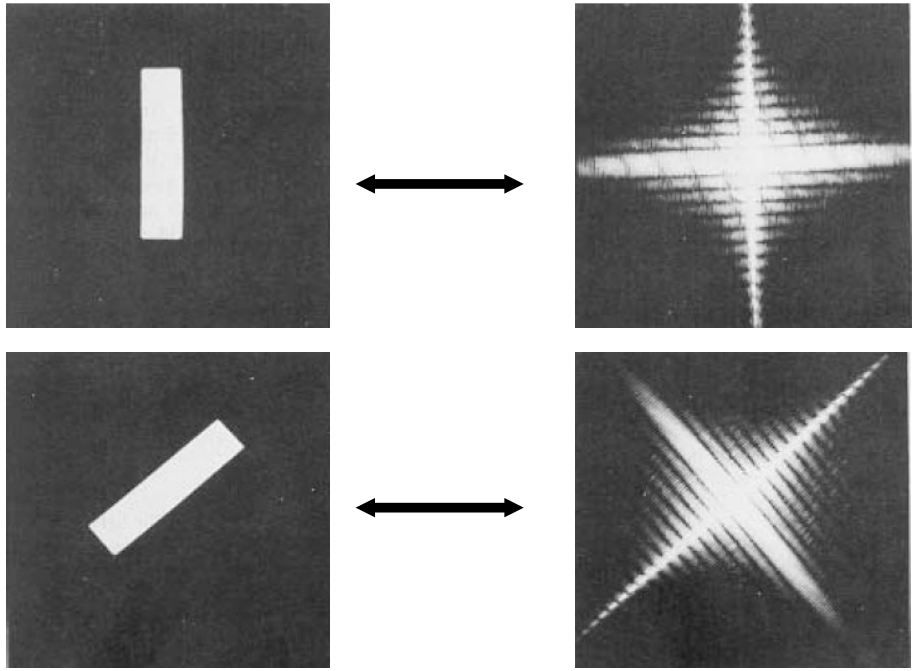
no translation

after translation

Naveen Sihag

DFT Properties: (5) Rotation

- Rotating f(x,y) by θ rotates F(u,v) by θ



Naveen Sihag

DFT Properties: (6) Addition/Multiplication

$$F[f(x,y)+g(x,y)]=F[f(x,y)]+F[g(x,y)]$$

but … $$F[f(x,y)g(x,y)]\neq F[f(x,y)]F[g(x,y)]$$

Naveen Sihag

DFT Properties: (7) Scale

$$af(x,y) <---> aF(u,v)$$

Naveen Sihag

DFT Properties: (8) Average value

Average: $$\bar{f}(x,y) = \frac{1}{N^2}\sum_{x=0}^{N-1}\sum_{y=0}^{N-1} f(x,y)$$

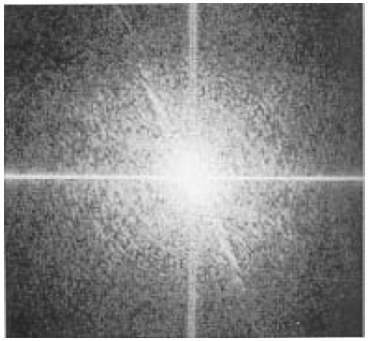
F(u,v) at u=0, v=0: $$F(0,0) = \frac{1}{N}\sum_{x=0}^{N-1}\sum_{y=0}^{N-1} f(x,y)$$

So: $$\bar{f}(x,y) = \frac{1}{N} F(0,0)$$

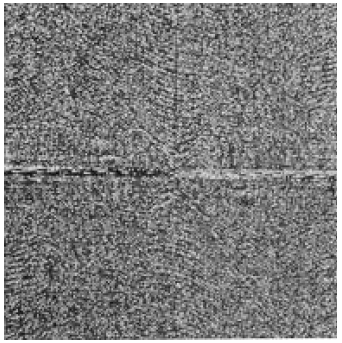
Naveen Sihag

Magnitude and Phase of DFT

- What is more important?



magnitude

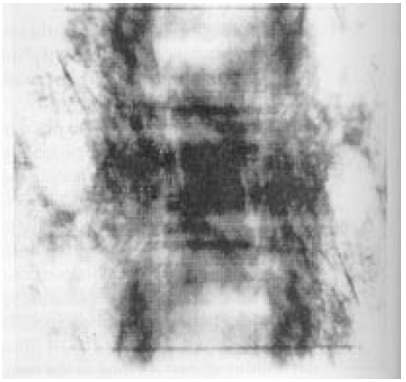


phase

- **Hint:** use inverse DFT to reconstruct the image using magnitude or phase only information

Naveen Sihag

Magnitude and Phase of DFT (cont'd)



Reconstructed image using
magnitude only
(i.e., magnitude determines the contribution of each component!)

Reconstructed image using
phase only
(i.e., phase determines which components are present!)

Naveen Sihag
